

Sequence logo for a 15-nucleotide motif. The sequence is TGGAGCATGTCGTC. The logo shows the relative frequency of each nucleotide (A, C, G, T) at each position. The first four positions (TGGAG) show high conservation, with the fifth position (C) being the most conserved. The last four positions (TCGTC) also show high conservation, with the sixth position (G) being the most conserved. The middle positions (CATG) show lower conservation, with the seventh position (C) being the most conserved.
